

Phase 1 - Brainstorming & Ideation

Project Title

Implement Client Script and UI Policy - Incident

Objective

To understand and implement Client Scripts and UI Policies in ServiceNow Incident Management.

Ideas

- Implement a Client Script for incident form behavior.
- Implement a UI Policy to control form fields.
- Make required fields based on conditions.
- Improve the user experience of the Incident form.

Expected Outcome

A functional ServiceNow Incident form with the required Client Script and UI Policy behavior.

Phase 2 - Requirement Analysis

Project Title

Implement Client Script and UI Policy - Incident

Requirements

- Create and configure a Client Script in ServiceNow.
- Create and configure a UI Policy for the Incident table.
- Define the required conditions and field behavior.
- Test the form behavior based on the defined conditions.

Functional Requirements

- The Incident form should respond to the specified conditions.
- Required fields should be controlled correctly.
- The Client Script and UI Policy should work without errors.

Expected Outcome

A properly configured Incident form that satisfies the project requirements.

Phase 3 - Project Design

Project Title

Implement Client Script and UI Policy - Incident

Design

The project is designed to improve the Incident form in ServiceNow using Client Script and UI Policy.

Components

- ServiceNow Incident Table
- Client Script
- UI Policy
- Form Fields
- Conditions

Workflow

1. Open the Incident form.
2. Check the defined conditions.
3. Execute the Client Script when applicable.
4. Apply the UI Policy.
5. Change the required field behavior.
6. Verify the final form behavior.

Expected Result

The Incident form should behave according to the defined Client Script and UI Policy conditions.

Phase 4 - Project Planning

Project Title

Implement Client Script and UI Policy - Incident

Project Plan

1. Analyze the Incident form requirements.
2. Create and configure the required Client Script.
3. Create and configure the required UI Policy.
4. Define the required conditions and field behavior.
5. Test the configuration.
6. Fix any errors found during testing.
7. Document the completed project.

Resources Required

- ServiceNow Developer Instance
- Incident table
- Client Script
- UI Policy
- Web browser

Timeline

- Requirement analysis
- Design and planning
- Development
- Testing
- Documentation

- Demonstration

Expected Outcome

A completed and tested ServiceNow Incident configuration that meets the project requirements.

Phase 5 - Project Development

Project Title

Implement Client Script and UI Policy - Incident

Development Work

Client Script

A Client Script was implemented to control the behavior of the Incident form based on the required conditions.

UI Policy

A UI Policy was configured for the Incident table to control field behavior according to the specified conditions.

Implementation Steps

1. Open the ServiceNow Developer Instance.
2. Navigate to the Incident table.
3. Create and configure the required Client Script.
4. Create and configure the required UI Policy.
5. Define the required conditions.
6. Configure the required field actions.
7. Save the configurations.
8. Verify the implementation on the Incident form.

Development Result

The Client Script and UI Policy were successfully implemented in the ServiceNow Incident application.

Phase 6 - Project Testing

Project Title

Implement Client Script and UI Policy - Incident

Testing Process

1. Open the ServiceNow Incident form.
2. Test the Client Script with the required conditions.
3. Verify that the expected form behavior occurs.
4. Test the UI Policy conditions.
5. Verify that the required fields and field behavior are correct.

6. Check that the configurations work without errors.
7. Confirm the final Incident form behavior.

Test Result

The Client Script and UI Policy were tested on the Incident form.

Expected Result

The Incident form should correctly apply the configured Client Script and UI Policy behavior when the specified conditions are met.

Conclusion

The implemented functionality was verified through testing and the expected behavior was observed.

Phase 7 - Project Documentation

Project Title

Implement Client Script and UI Policy - Incident

Project Overview

This project focuses on implementing a Client Script and UI Policy in the ServiceNow Incident application.

Documentation

The project documentation includes:

- Project objective
- Requirements
- Project design
- Project planning
- Development process
- Testing process
- Implementation results

Implementation Summary

The Client Script and UI Policy were configured in the ServiceNow Incident form according to the defined requirements.

Testing Summary

The implemented configurations were tested to verify the expected Incident form behavior.

Conclusion

The project was completed with the required implementation, testing, and documentation.

Phase 8 - Project Demonstration

Project Title

Implement Client Script and UI Policy - Incident

Demonstration

The completed project is demonstrated using the ServiceNow Incident application.

Demonstration Steps

1. Open the Incident form.
2. Demonstrate the configured Client Script.
3. Demonstrate the configured UI Policy.
4. Show the field behavior based on the defined conditions.
5. Verify that the expected functionality works correctly.

Demonstration Result

The implemented Client Script and UI Policy functionality was demonstrated successfully on the ServiceNow Incident form.

Conclusion

All eight project phases were completed, documented, and organized in the GitHub repository.
